

Having your log cabin assembled for you

Whilst many of our customers assemble their own log cabin very successfully and obtain a great deal of pleasure from the sense of achievement in carrying the project through from inception to completion, if you would prefer to have your log cabin assembled this can also be arranged.

Gudrum Classics Ltd does not offer an assembly service. We can however supply contact information for independent assembly services who customers can contact to assemble their buildings.

If you choose to use the assembly service, you will pay the assembly team on satisfactory completion of your building. We can provide contact details for various independent assemblers around the country however it is important that you verify their suitability for your specific job, that you check insurances and any other matter or concerns that you may have. We strongly recommend that you check their work before they leave the site.

Please note: Any service other than the supply of the products and their accessories forms a separate contract between you and the service provider and we do not recommend or warrant their work or services in anyway whatsoever.

Prices for assembly start at £890.00

This price includes travel expenses and labour for the assembly team.

Services offered:

- Cabin assembly
- Timber treatment of the building (On request for additional fee)
- Basic site work either ancillary or unrelated to the building itself

The assembler will build the cabin on to a pre prepared base, the base must be flat, solid, and level. The assemblers do not offer base preparation services, nor can they offer advice on plumbing / drainage or electrics – these services must be undertaken by a certified tradesperson.

Most comments and feedback from previous customers who have used the assembly service are very positive.

The buying process for a log cabin where our customer requires an assembly service is usually as follows:

1. Our customer will either purchase a log cabin/summer house directly through the website or contact us to discuss styles and designs and the various other options available and make the purchase over the phone.
2. As above – many of our customers choose to assemble their own log cabin (see below for more information). This is perfectly possible for anyone with basic DIY skills and tools and can be a very rewarding experience. As a guide about 8/10 customers will assemble their own cabin or use local service providers.
3. However for those who do not wish to assemble their cabin, part of the purchase decision may depend on the assembly service that we can suggest. If this is the case this would be discussed at this early stage. We would also establish whether there would be other work to carry out at the same time. If the service requirement is simply and assembly service, we will give a price over the phone immediately. This will be a quoted figure from the assembly providers price list.
4. We then schedule in delivery dates and liaise with the customer and the assemblers to ensure a smooth completion of the delivery and the work.

In summary

Contact us for information on the log cabin of your choice and we will liaise directly with the assemblers to obtain a quotation. They usually arrive on site within just a couple of days of the building being delivered. The contract for assembly and any other work will exist between yourself and the service providing company. We are not involved in the assembly process in any way except in quoting prices from their list and providing them with your contact details / you with their contact details. You will pay the assembly company directly the figure agreed at the point of the order of your log cabin when the job is completed to your satisfaction.

If you would like more information on this service, please contact us on 01636 858 290. In the case of self assembly, all of our garden buildings are designed to be easy self-assembly. The garden buildings include all parts, roofing materials (see options on product page), glazing etc.

The assembly process is likely to take between 1-2 days for two people who have basic DIY skills and very few basic tools. All garden buildings are supplied with easy to follow assembly instructions (some are available to view on product pages)

Each individual building is delivered with its own specific assembly instructions. The garden building should be assembled onto a flat and level base, the surface of which should be slightly above the surrounding ground area (to prevent water pooling underneath your building).
